The construction of hydroelectric plant „Djerdap I“ is one of the greatest construction project in the 20th century in SFR Yugoslavia. It changed lives of many people who are living in that area. Although the hydroelectric plant is placed in the municipality of Klado-vo, it's construction most affected set-

tlements in municipality Majdanpek. The most important change is increase of employment, changing location of some settlements and flooding of agricultural land. The aim of this work is to describe these changes and to estimate them, are they positive for population or not.

Development of the City of Belgrade in terms of globalization from year 2000

Teodora Nikolić

e-mail: teodoranikolic7.08@gmail.com

Paper analyzes the impact of the globalization process, i.e. international economic and cultural flows, on contemporary development of the City of Belgrade. Beside that, it analyzes whether Belgrade can be categorized as “global city” and what is its position in the global urban system. Consideration was given to various aspects of the contempo-

rary development of the City, starting with the economic, over demographic and social, to territorial development. In conclusion are discussed the possibilities of future development of the City based on the current direction of development and structural transformation.

Key words: Belgrade, globalization, contemporary development
